

CLP mixture calculation tool 2023

Why?

Chemical products supplied to third parties must be classified and labelled in accordance with the CLP Regulation (EC 1272/2008).

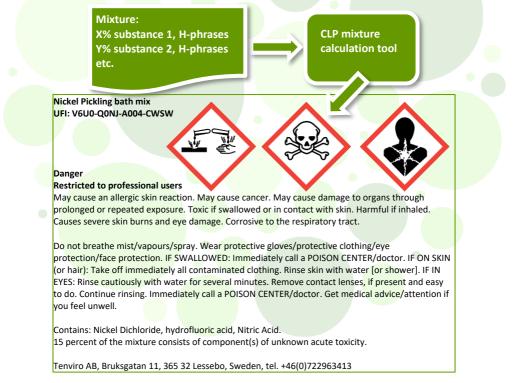

Even in-house mixtures (laboratory, reservoirs etc) require in some member-states CLP classification & labelling (occupational health legislation). The rules therefore also apply to downstream users.

Classifying and labelling mixtures is difficult and time-consuming. Therefore, we have developed a convenient and affordable tool in Excel for support.

The calculation tool

With the concentrations and hazard statements (H-codes) of the raw materials, the tool drafts a label with the (EU)H & P statements, pictograms, signal word and relevant substances. See a sample label below. The annexes show the input data.

With this tool the classification & labelling of mixtures or checking mixture classifications will only cost you a fraction of the time. Note that the tool is however not a replacement of the CLP regulation, and that errors can never be ruled out.

Cost & Users

Costs (excluding VAT):

- CLP mixture calculation tool: €445*
- CLP classification search tool: €100**
- Update subscription:

€100** (optional) **€75/year** (optional).

* \in 50 discount when attending our CLP mixture classification training course. **Free for users of the CLP mixture calculation tool, otherwise \in 100 + \in 35/ year updates

Updates

The tool is regularly updated following legislative changes and customer requirements. Updates within 1 year of purchase are free of charge.

Classification search tool

To help gathering information on classifications we have developed a separate tool in Excel. For up to 50 substances the tool gives (if any) CLP annex VI classifications, links to the REACH dossier page with classification information or the C&L inventory, ongoing harmonisations and SVHC candidate list inclusions.

Helpdesk & Training

We provide a free of charge helpdesk for questions about the tool. The tool does not require training, however knowledge of CLP mixture calculation & labelling rules is needed when using classification tools (see our training course: CLP mixture classification)

Users

Hospital & school laboratories, metal plating companies, chemicals suppliers.

Tenviro

Tenviro AB is a consultancy & training bureau specialised in chemical legislation with a background within the REACH &CLP helpdesk.

For questions, the order form, please contact Erwin Theelen via:

Contact information

August 2023

Specifications CLP mixture calculation tool

system	Excel workbook in Microsoft (Office) 365 (other versions will not work)
language	The tool is in English, but all label information can be shown in any of the official languages of the 27 EU member-states (and Norwegian).
input	 The tool requires for all substances in the mixture as input: the maximum concentration the H-statements (codes) for health & environment and EUH codes for endocrine disruptors and PBTs any applicable (CLP annex VI, REACH dossier, substance SDS): M-factors and Specific Concentration Limits (SCLs) LD/LC₅₀ or ATE values (if not known, the tool uses legal default values) Also, the flash- & boiling point, pH and viscosity of the mixture can be given.
output	 The tool calculates for the mixture: the H-statements for health & environment and EUH208 & EUH210 (other H & EUH statements can be added manually), signal word & pictograms the applicable P-statements with an indication of importance (the 6 most appropriate statements must be selected by the user) a draft label with recommendations for further editing & printing (in Word) an indication regarding the need for poison centre notification (& UFI), SDS, tactile warning, child-resistant fastening and conclusions regarding CMR status & SEVESO III category, all based on only the H-statements.
limitation	 The tool works without a substance database and only uses rules based on substance concentrations & classifications. Note that when test-data for the mixture or similar mixtures (or sometimes ingredients) is available, classification should be based on that data instead Health and environmental hazards can be calculated, for physical hazards such as flammability there are no calculation rules in CLP 10 substances can be entered with each max. 15 H-statements (health, environmental, endocrine disrupting or PBT hazards) The label has a fixed size which must be further edited (like in Word) The tool is not a replacement of the legal CLP text and should not be used as only resource when placing products on the market.
manual	The tool comes with a manual with an explanation of the tool and background information regarding CLP calculation rules.

As an attachment you will find examples/ screen dumps of some parts of the calculation tool. There is also an informative **introductory film**.

input

Entering required mixture & substance information & result overview

Enter mixture informati	on		
Enter the name of the mixture		Nickel pickling b	ath mix
Is the pH of the mixture ≤ 2 or $\geq 11,5$?	no		
If known, enter both (in °C) flashpoint		and boiling point:	
Attention, not all cells are empty Hazardous mixture, label is required:	H290 H317	H350 H373 H301+H3	11 H332 H314 EUH071
Enter classificaton information for a	all substances		
SUBSTANCE 1			
Name:	Nickel d	ichloride	
Max % in mixture (do not use % sign):	0	,2	
Indicate any unknown Acute toxicity:			_
H-codes (pick hazard codes from the list) in column D	h301		
Pick health (H3), environmental (H4) & Endocrine disruptor, PBT (EUH380, 381, 430, 431, 440, 441, 450, 451) codes from the classification of the substance. For H317, H334, H300, H310, H330 the category is specified.	H331(d/m)		
For inhalation tox (H330, H331 & H332) also the phase related to testdata: (v)apour, (g)as, (d/m) dust/mist	h315	20	
if not sure and no LC50 is known, choose (v)apour).	H317(1/1B)	0,01	
Add any physical (H2) hazards and any other EUH statements under worksheet Labelinfo.	H334(1/1B)		
	h372	1	Give also H373 with its SCL
Enter per H-code any SCL/LD50/M (CLP annex VI, REACH dossier, SDS) in column E (never use % or symbols) Specific Concentration Limits; for hazard classes with more SCLs, give the SCL for each category	h373	0,1	
(like separate SCLs for H314, H315 and H319).	h350		
LD50s/ ATEs (only for H300, H301, H302, H310, H311, H312, H330, H331, H332). For inhalation, use:	h341		
- 4-hour data (divide 1-hour data by 2, or by 4 if dust/mist)	h360		
- for Gas: ppmV (ml/m3), convert mg/l data (ppmV = mg/l*1000*24,45*1/MW)	h400		
LD50s must fit the hazard category (the tool warns if wrong), if not sure do not enter an LD50. - M-factors (only for H400 & H410); for substances classified both H400 & H410 with only 1 M-factor	h410		
in CLP annex VI, use that factor for both H400 and H410.			
Check the first cells in column D & E, and the guide that comes with the tool for more information.			
SUBSTANCE 2			
Name:		ioric acid	
Max % in mixture (do not use % sign):		2	
Indicate any unknown Acute toxicity:			_
H-codes (pick hazard codes from the list) in column D Pick health (H3), environmental (H4) & Endocrine disruptor, PBT (EUH380, 381, 430, 431, 440, 441, 450, 451)	h314	1	give also H315 & H319 with their SCL
codes from the classification of the substance. For H317, H334, H300, H310, H330 the category is specified.	h319	0,1	
For inhalation tox (H330, H331 & H332) also the phase related to testdata: (v)apour, (g)as, (d/m) dust/mist	H300(2)		
if not sure and no LC50 is known, choose (v)apour).	H310(1)		
Add any physical (H2) hazards and any other EUH statements under worksheet Labelinfo.	H330(2)(g)	171	
Enter per H-code any SCL/LD50/M (CLP annex VI, REACH dossier, SDS) in column E (never use % or symbols)			
Specific Concentration Limits; for hazard classes with more SCLs, give the SCL for each category			
(like separate SCLs for H314, H315 and H319).			
LD50s/ ATEs (only for H300, H301, H302, H310, H311, H312, H330, H331, H332). For inhalation, use: - 4-hour data (divide 1-hour data by 2, or by 4 if dust/mist)			
- for Gas: ppmV (ml/m3), convert mg/l data (ppmV = mg/l*1000*24,45*1/MW)			
LD50s must fit the hazard category (the tool warns if wrong), if not sure do not enter an LD50.			
M-factors (only for H400 & H410); for substances classified both H400 & H410 with only 1 M-factor			
in CLP annex VI, use that factor for both H400 and H410.			
Check the first cells in column D & E, and the guide that comes with the tool for more information.			
SUBSTANCE 3			
Name:	Nitri	c acid	
Max % in mixture (do not use % sign):	1	5	
Indicate any unknown Acute toxicity:	oral and der	mal unknown	
H-codes (pick hazard codes from the list) in column D	h314		
Pick health (H3), environmental (H4) & Endocrine disruptor, PBT (EUH380, 381, 430, 431, 440, 441, 450, 451)	H331(v)	2,65	
codes from the classification of the substance. For H317, H334, H300, H310, H330 the category is specified. For inhalation tox (H330, H331 & H332) also the phase related to testdata: (v)apour, (g)as, (d/m) dust/mist			
or innalation tox (H330, H331 & H332) also the phase related to testdata: (vjapour, (g)as, (q/m) dust/mist if not sure and no LC50 is known, choose (v)apour).			
Add any physical (H2) hazards and any other EUH statements under worksheet Labelinfo.			
Enter per H-code any SCL/LD50/M (CLP annex VI, REACH dossier, SDS) in column E (never use % or symbols)			
 Specific Concentration Limits; for hazard classes with more SCLs, give the SCL for each category (like separate SCLs for H314, H315 and H319). 			
- LD50s/ ATEs (only for H300, H301, H302, H310, H311, H312, H330, H331, H332). For inhalation, use:			
- LDS0S/ ATES (OTILY TOT HS00, HS01, HS02, HS10, HS11, HS12, HS30, HS31, HS32). FOT INITIATATION, USE:

output

Resulting CLP hazard label and Indication of classification consequences

Clean label data & advice		
Advice: Copy-paste the label to Word before printing and adjust to the correct sizes (check below).	Nickel pickling bath mix UFI: V6U0-Q0NJ-A004-CWSW	
Correct the following issues: Aeplace with info. -Delete non-relevant / parts. -Delete [] part if not appropriate.	Danger. Restricted to professional users. May be corrosive to metals. May cause an allergic skin reaction. May cause cancer. May cause damage to organs through prolonged or repeated exposure. Toxic if swallowed or in contact with skin. Harmful if inhaled. Causes severe skin burns and eye damage. Corrosive to the respiratory tract. Do not breathe dust/fume/gas/mist/vapours/spray. Wear protective gloves/protective clothing/eye protection/face protection. IF SWALLOWED: immediately call a POISON CENTER/doctor/ IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water [orshower]. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. IF exposed or concerned: Get medical advice/attention. Immediately call a POISON CENTER/doctor/ Contains: Nickel dichloride, Hydrofluoric acid, Nitric acid. 15 percent of the mixture consists of component(s) of unknown acute toxicity. Tenviro AB, Bruksgatan 11, 365 32 Lessebo, Sweden, tel. +46(0)722963413	

	Label, pictogram and font size information		
Pick pack	kaging size	Minimum sizes for label, each pictogram & font to respect when edditing & printing the label (when possible/ room use larger pictograms)	
	> 500 Litre	Label size: 148 x 210 mm (A5). Pictogram size as diamond: 46 x 46 mm, as square in Word: 65 x 65 mm. Font-size min 20pt.	

The text on the label shall have the following characteristics (according to the text of the draft CLP amendment: not yet final, this is also the case regarding the font-size): (a) the background of the label shall be white

(b) the distance between two lines shall be equal or above 120 % of the font size

(c) a single font shall be used that is easily legible and without serifs

(d) the letter spacing shall be appropriate for the selected font to be comfortably legible.

Create a Word document a bit larger than needed and copy-paste above label. At the upper left corner of the pasted info is a + (table), dick this and go to Layout (next to Tabeldesign) and choose "Convert table to text". Edit/ fit text, font & pictogram sizes if needed (there are always 8 pictograms grouped, ungroup & delete empty pictograms if needed).

Use the label on all packaging layers (if the transport packaging requires transport labelling or marking, that packaging doesn't need a CLP label unless a single packaging is used).

Check the result (label content, lay-out, sizes etc.) always with the Labelling guidance, especially in case of exemptions in specific cases

(https://echa.europa.eu/documents/10162/2324906/clp_labelling_en.pdf)

Indication of consequences of the classification

Indication of general consequence	es for users
	Mixture is CMR (H340, H350 or H360): possibly banned for consumer supply, start phasing out CMR components. No PBT/ ED substance is used
SVHC (CMR and/ or PBT/ ED):	(however the mixture still may contain a substance included on the SVHC list).
SEVESO III, annex I part 1 cat.:	Indication possible Seveso categories (based only on H-codes): H301 falls under H2 when there is a lack of conclusive inhalation and dermal toxicity
	data (SEVESO III Annex I note 7, check this).
	https://eur-lex.europa.eu/eli/dir/2012/18
Indication of consequences if the	product is supplied to third parties (B2B or B2C)
UFI & Poison Centre Notification:	For this mixture a UFI & PCN is required (if not exempted)!
Safety Data Sheet (only for B2B):	SDS required
Indication of extra consequences	in case of supply to the general public (consumers/ B2C), check always with the ECHA labelling guidance (also for any H304 aerosol exemptions)
Tactile warnings of danger (TW):	Tactile warnings of danger (TW): on label/ packaging required when supplied to general public/ consumers (EN ISO standard 11683)
Child-resistant fastenings (CRF):	Child-resistant fastenings (CRF): on packaging required when supplied to general public/ consumers (EN ISO standard 8317/ CEN EN 862)
If CMR due to a	substance in CLP annex VI as H340, H350 or H360: consumer use & supply are banned (REACH annex XVII entry 29-30) if not fuel, pharma, artist paint.
	If banned choose Restricted to professional users under Labelinfo: don't supply B2C
	NTELLECTUAL PROPERTY OF TENVIRO AB, ONLY TO BE USED BY CLIENTS OF TENVIRO. FURTHER DISTRIBUTION OR DISSEMINATION IS NOT ALLOWED. PED WITH GREAT CARE. BUT FRRORS CANNOT BE RULED OUT. THIS TOOL SHOULD NOT BE USED AS AN ALTERNATIVE FOR THE LEGAL TEXT OF THE CLP REGULATION.

The tool, guide & training material are a simplification/ summarisation of the main CLP rules. Do not use this tool or information as only resource when putting products on the market. Tenviro accepts no liability for damage resulting from the use of the tool, the guide or training material.

Other EU label languages can be chosen.
